

**INFANT AIRWAY
MANAGEMENT TRAINER
LF03623U
INSTRUCTION MANUAL**

Life/form® Products by NASCO

About the Simulator . . .

The **Life/form®** Infant Airway Management Trainer is the most realistic simulator available for the training of intubation skills. NASCO has taken great care to create an airway management trainer that is anatomically correct in respect to both size and detail.

Landmarks include: gum line, tongue, oral and nasal pharynx, larynx, epiglottis, arytenoids, false and true vocal cords, cricoid ring, tracheal rings, trachea, esophagus, lungs, and stomach.

NASCO's Infant Airway Management Trainer allows you to practice oral intubation, and suction techniques can also be performed and evaluated. The simulator was designed to use an uncuffed endotracheal tube measuring up to 4.0 mm I.D.

List of Components:

1. Airway Management Trainer Head on a Stand
2. 8-oz. bottle of Spray Lubricant
3. Right and Left Simulated Lungs
4. Simulated Stomach
5. Packing Foam Block & Carrying Case

Set Up for Use on the Stand:

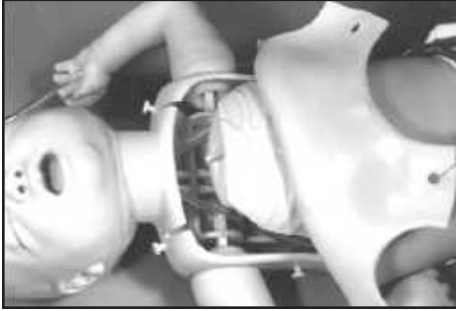

Your Airway Management Trainer is ready to use upon delivery. Simply remove it from the carton and unwrap the packing material. The lung and stomach bags are already in place and ready to use.

Set Up for Use on the Resusci® Baby*

To transfer the Infant Airway Management Trainer mounted on a stand to the Resusci® Baby* CPR manikin, first remove the lungs and stomach from the trainer. Next, carefully unhook the head from the stand by unsnapping the "Z" tang. Replace the lungs and stomach with the threaded fittings and clamps supplied with the Infant Airway Management Trainer. Clamp the threaded ends in the trachea and esophagus (the threaded fitting with the larger nipple goes in the trachea). The clamps are opened by simply spreading the locking mechanism apart sideways. The trainer is now ready to place on the Resusci® Baby*.

Removing the Resusci® Baby* Head

Before it is possible to place the Airway Management Trainer head on the Resusci® Baby*, you will need to remove the present head. To do this, simply unhook the outer chest skin from the outer shell. Then disconnect the lung and stomach air lines (if present) where they connect into the head.

Once the lungs and stomach have been disconnected, remove the head from the body by squeezing together the “Z” tangs and sliding the head out from the body mounting bracket.

Now that the CPR head has been removed, place the Airway Management Trainer head on the body. This can be done by lining up the “Z” tang on the neck of the head with the mounting opening in the body of the manikin. Once lined up, carefully push the “Z” tang into the opening until you hear it click into place.

Connect the trachea tube up to the large diameter tubing and the esophagus tube to the small diameter tubing. (Note: If no small diameter stomach tubing is present, then you must plug off the esophagus. To do this, simply loosen the clamp on the esophagus and remove the plastic fitting. Replace it with the small cap plug supplied with your kit and retighten the clamp.) Place the outer chest skin back in place, and you are ready to train.

Lubrication:

Before using the Infant Airway Management Trainer, lubricate both the oral cavity and the endotracheal tube you plan to use with the NASCO lubricant provided.

PLEASE NOTE: NASCO recommends the use of the provided lubricant or a similar vegetable-based lubricant for the Infant Airway Management Trainer. The use of a silicone or similar lubricant may cause damage to the simulator, thus voiding NASCO's warranty on the trainer.

Cleaning the Face:

Normal soil can be removed from the face of the trainer with mild soapy water. REN Cleaner (W09919U) will remove stubborn stains. Simply apply REN to the soiled area and wipe it clean with a soft cloth or paper towel.

Important:

It is vital that the packing foam is retained for storage purposes. This step will certainly prevent damage to your simulator. With the mounting bracket in a vertical position, place the foam piece over the head so the opening circles under the chin and over the bridge of the nose.

Never place the trainer on any kind of printed paper or plastic. These materials will transfer indelible stains. Ballpoint pens will also make indelible stains. Do not use any cosmetics.

Available Supplies:

LF03644U NASCO Spray Lubricant

LF03627U Replacement Lungs

LF03628U Replacement Stomach

LF03631U Replacement Headskin
with Airway

W09919U REN Cleaner
